DVH

- Measuring range:
3-8 ... 3057 - 280 187 m³_N/h
- Accuracy:
±0,7 % of reading (liquids)
±1 % of reading (gases and steam)
- p_{max}: 100 bar abs; t_{max}: 400 °C
- Connection: ANSI 1/2" up to ANSI 8",
DN 15 up to DN 200
- Material: stainless steel
- Output: 4 - 20 mA, HART® Protocol
- **Sensor design without sealing**
- **Integrated temperature and pressure measurement**
- **Measurement of mass and density possible**
- ATEX, IEC Ex

Despriction

The KOBOLD Vortex Flowmeter DVH utilizes three primary sensing elements: **a vortex shedding velocity sensor, a RTD temperature sensor and a solid-state pressure transducer** to measure the mass flow rate of gases, liquids and steam.

Systems that use external process measurements may not provide adequate compensation for the fact that process conditions can change radically between the point of velocity measurement and the point where upstream or downstream pressure and temperature measurements are being made.

Because the DVH multivariable flow meter measures all of these parameters in **a single location**, it delivers a more accurate process measurement.

Integrating multivariable output capability with a single line penetration also simplifies system complexity and helps reduce initial equipment cost, installation cost and maintenance costs.

Advantages of the DVH Vortex Flow Meter

- DVH-V provides cost effective volumetric flow monitoring solution for most liquids
- DVH-T incorporates temperature sensing to provide a compensated mass flow reading of saturated steam
- DVH-P multivariable meter delivers mass flow, temperature, pressure and density readings
- Connections: ANSI 1/2" up to ANSI 8", DN 15 up to DN 200
- Easy to install and commission
- Field- configurable ranges, outputs and displays
- HART® Protocol
- FM-approved, IEC Ex / ATEX

Measuring principle

The measuring principle is based on the Karman vortice street. A specially shaped bluff body is located in direction of the flow. From a certain flow velocity on vortices are generated through the bluff body.

This small vortices generate small pressure differences which are sensed from a piezoelectric sensor behind.

The number of vortices is directly proportional to the flow velocity and will be provided to an evaluating electronic.

Model DVH-V

The Model DVH-V delivers a direct reading of volumetric flow rate - generally the most costeffective solution for liquid flow monitoring - in applications ranging from general water flows to hydrocarbon fuel flow measurement.

Model DVH-T

The Model DVH-T integrates a precision 1000 Ω platinum RTD temperature sensor that can be used to calculate and output a compensated mass reading. This device is typically used to measure flow rates of saturated steam.

Model DVH-P

The Model DVH-P offers you flow computer functionality in a compact field device. This multivariable instrument incorporates temperature and pressure sensors to provide an instantaneous reading of compensated mass flow rate of gases, liquids and steam. In addition to outputs for totalized mass and alarm settings, the field-configurable electronics deliver up to three analog (4 - 20 mA) outputs of five process measurements, including volumetric flow rate, mass flow rate, pressure and density.

Model DVH-E

The Model DVH-E Energy Monitoring option permits real-time calculation of energy consumption for a facility or process. The meter can be programmed to measure steam, hot water or chilled water.

The flow meter DVH-E monitors one side of the process, either sent or return, and uses the input from a second separate temperature sensor on the opposite leg of the process to calculate the change in energy. (Not approved for custody transfer applications.)

Selectable energy units include:

Btu, joules, calories, Watthours, Megawatt-hours and Horsepower-hours.

The local or remote electronics indicates: temperature, delta T, mass total and energy total.

Technical Details

Mass flow rate accuracy: for gas and steam based on 50-100 % of pressure range

Model DVH Accuracy

Process variables	Liquids	Gas/Steam
Volumetric Flow Rate	± 0.7 % of rate	± 1 % of rate
Mass Flow Rate	± 1 % of rate	± 1,5 % of rate
Temperature	± 1 °C ; ± 2 °F	± 1 °C ; ± 2 °F
Pressure	± 3 % of full scale	± 0.3 % of full scale
Density	± 0.3 % of reading	± 0.5 % of reading

Repeatability

- Mass Flow Rate: ± 0.2 % of rate
- Volumetric Flow Rate: ± 0.1 % of rate
- Temperature: ± 0.1 °C, ± 0.2 °F
- Pressure: ± 0.5 % of full scale
- Density: ± 0.1 % of reading

Technical Details (continued)

Stability over 12 Month

Mass Flow Rate: ± 0.2 % of rate
 Volumetric
 Flow Rate: ± negligible
 Temperature: ± 0.5 °C, ± 0.9 °F
 Pressure: ± 0.1 % of full scale
 Density: ± 0.1 % of reading
 Response time: adjustable from 1 to 100 s

Process and Ambient Temperature

Standard: -40 to 260 °C, -40 to 500 °F
 High Temperature: up to 400 °C, 750 °F
 Ambient temperature: -20 to 60 °C, -5 to 140 °F
 Storage temperature: -40 to 65 °C, -40 to 150 °F

Max. Operating Pressure		Max. Overload pressure	
psia	bar abs	psia	bar abs
30	2	60	4
100	7	200	14
300	20	600	40
500	35	100	70
1500	100	2500	175

Auxiliary Energy

Model DVH-V: 12-36 V_{DC}, loop powered
 Model DVH-P, DC option: 12-36 V_{DC}, 100 mA max
 Model DVH-P, AC option: 85-240 V_{AC}, 50/60Hz, 2 Watt
 Display: alphanumeric 2-line (16 characters)
 digital LCD Display
 rotateable in 90° steps
 Buttons: Six buttons for full field configuration
 The pushbuttons can be operated with magnetic wand without removal of enclosure covers.

Output signals

Analogue: 4-20 mA loop powered for volumetric meters
 Alarm: solid state relay 40 V_{DC}
 Totalizer pulse: 50 ms 40 V_{DC}
 Volumetric: 1x analogue, 1x totalizer pulse, HART®
 Multivariable: up to 3 analog signals
 3 alarms,
 1 totalizer pulse, HART®
 Option: Modbus process monitoring

Wetted Materials

Material: stainless steel 1.4404 (316L)
 Models with pressure transducer: Dupont Teflon® based thread sealant
 Version Standard temperature: Dupont Teflon® packing
 High temperature: Graphit based packing

Piping Conditions

Conditions	Pipe Diameters D	
	Upstream	Downstream
one 90° elbow before meter	10 D	5 D
two 90° elbows before meter	15 D	5 D
two 90° elbows before meter (out of plane)	25 D	5 D
Reduction before meter	10 D	5 D
Expansion before meter	20 D	5 D
Partially open valve	25 D	5 D

Velocity Range

Liquids

Maximum velocity: 9 m/s (30 ft/s)
 Minimum velocity: 0.3 m/s (1 ft/s)

Gas/stream

Maximum velocity: 90 m/s (300 ft/s)
 Minimum velocity: $\frac{6,1}{\sqrt{\text{Density} \left(\frac{\text{kg}}{\text{m}^3}\right)}}$ $\frac{5}{\sqrt{\text{Density} \left(\frac{\text{Lb}}{\text{ft}^3}\right)}}$

Water Minimum and Maximum Flow Rates
